

## Type II Vinyl

Our Type II Vinyl wallcoverings come in 54" wide rolls that we digitally print to any square footage. This allows Rollout to minimize waste – and your costs. Rollout delivers ready-to-hang wallpaper, developed to your precise specifications, to your project site.

The major difference between digital printing and traditional screened papers is that digital printing allows for greater versatility, flexibility and do not have the start-up costs or minimums that are associated with traditional papers. You are not limited to the selection of colour and pattern options that are available at the wallpaper store. Our papers are printed on demand where imagery, colour, scale and layout can be changed up until the point of production.

### Applications

Indoor murals, decorative wallcoverings, high-end residential environments, greater durability for hospitality, retail, corporate offices, and other commercial applications.

### Properties

- Meets ASTM, NFPA and BS476 for commercial wallcoverings
- Flame Spread: Class A, ASTM E84
